Subject Index — *Food Technology* — Volume 21, 1967

A

absorption of damaged fats
  effects on tissues, 279
acceptability
  food items for space flight feeding, 1361
acetylated monoglycerides
  coatings for food, 1462
acetylmethylcarbinol
  detection in citrus concentrates, 643
additive
  for inhibiting tomato enzyme, 920
additives (*see also:* food additives)
  effect on processed food flavor, 1627
  salt, effect on detinning canned spinach, 1516
adsorbents
  molecular sieve, for freeze-drying, 187
adsorption isotherms
  freeze-drying, using molecular sieves, 189
  moisture in wheat flour, 412
agitation
  effect in potato frying, 649
  heating rates of fruit products, 372
AID
  program for feeding developing nations, report on meeting, 243
AMFare (*see:* computer, restaurant)
Amido Black 10B
  meat protein determination, 351
amino acids
  canned apricots, quality, 416
  freeze-dried peppers, loss in storage, 341
amylaceous coatings
  food use development, 1064
  for foods, 1064
amylose
  hydroxypropylated, 72
analysis
  cryoscopy for food liquids, 132
  deep fat fried products, 43
  food processing economics, 1305
  meat protein, 351
analysis (cont.)
  microbiological rapid methods, need for, 627
angel cake
  egg albumen, quality test, 87
animal age
  beef juiciness and tenderness, effect on, 1278
ante-mortem
  effect of—stress on internal temperature in cooking beef, 393
antibody (*see:* fluorescent antibody)
antioxidants
  comparison of, 913
  effect in canning and storage of crabmeat, 397
  tertiary-butylhydroquinons, 912
apparatus
  microwave processing, experimental, 1257
apple
  essence, frozen, 454
  essence, storage stability, 665
  juice, frozen concentrated, stability, 454
apricots
  canned, fertilizer effects on amino acids and quality, 416
  dehydrating, levels of SO_2, 1402
  dried, white center, 420
asparagus
  canned in high-tin-fillet cans, 901
attributes control charts
  use in food processing, 501, 859
autoxidation
  fats and oils, 611

B

bacon
  influence of pre-chill processing techniques, 1262
bacteria
  content, salt, 193
  counts, irradiated frozen chicken, 1509
  differentiation by gas chromatography, 1130
bacteria (cont.)
  foods, rapid identification, 841
  in rapid cured hams, 1267
  removal from baby clams and oysters by electrophoresis, 439
bacteriology (*see:* bacteria)
baking
  cake, 412
bananas
  dehydrated, 1391
batter ingredients
  effect on frying fats fatty acids, 1638
beans
  canned green, in high-tin-fillet cans, 901
  dehydrated, use of papain for quick cooking, 1395
  dry, hardshell, 335
  dry, quick cooking, 344
  dry, size and density, 335
  green, effect of dehydration, freeze-drying and packaging, 1021
  Lima, quick cooking, 344
  residues, diazinon and transformation products, 1030
  snap, seed size for quality control for processing, 789
beef
  ante-mortem stress, effect on cooking temperature, 393
  freeze-drying rate and gas-flushing, 401
  ground, chemical composition, 779
  ground, cooking losses and heating rates, 779
  hamburger, charcoal broiling, 1133
  juiciness, effect of animal age, 1278
  muscle, freezer-burn and storage, 461
  pentoses and pentosans, 197
  prepackaged fresh, color stability and pre-display environments, 1518
  tenderness, effect of animal age, 1278
  tenderness, effect of ante-mortem stress and post-mortem aging, 393
  tenderness, measuring with tenderometer, 84

beef (cont.)
thermal conductivity during freeze-drying, 408
beets
standardizing sweetness in canned, 299
bitter substance
development in onion juice, 292
black gram
and rice fermented food, 916
Bombay duck
radiation pasteurization, 444
Bontrae (*see:* "textured protein foods")
2,3-butanedione (*see:* diacetyl)
buttermilk
diacetyl in, polarographic determination, 1265

C

cake
baking performance and wheat flour moisture, 412
gummy layers, development, 377
Canada
Food Research Institute, training in food science, 1014
canned foods
composition of headspace gas, 365
cans
high-tin-fillet and quality, 901
canthaxanthin
new food color, 331
carbohydrate changes
sweet potato flakes, 1529
carbon dioxide
for flushing freeze-drying beef, 401
carboxymethylcellulose
to prevent gummy layers in cake, 377
carotenoids
acanthaxanthin, 331
carrots
canned in high-tin-fillet cans, 901
centrifugal film evaporator
flavor retention and heat transfer in, 1179
cereal chemistry
meeting of AACC, report on, 1328
charcoal broiling
hamburger and chicken breasts, 1133
cheese
soybean, 1033, 1035
cherries
brined, influence of SO_2, pH and salts, 1028
Montmorency, pitting, 1524
chicken
breasts, charcoal broiling, 1133
fat stability in dried protein food mixes, 466
fryer, low-dose ionizing irradiated, 1509
insecticides residues, effects of cooking, 435
meat, emulsifying capacity of proteins, 1141
radiation sterilized, 792
chilling (*see:* cooling)
chromatography
gas (*see:* gas chromatography)
corn saccharides, 424
citric acid
effect on canning and storing crabmeat, 397
citrus
concentrate, detecting diacetyl and acetylmethylcarbinol, 643
juices, standardization, 906
clams
raw baby, removal of bacteria by electrophoresis, 439
Clostridium botulinum
toxinogenesis in perishable cooked meats, 204
Type E in frozen vacuum-packed fish, 296
Type E in vacuum-packed meats, 433
coatings for foods
acetylated monoglycerides, 1462
amylaceous, 1064
coconut processing
prevent spoilage in tropics, means for, 255
coefficients
heat transfer in fruit products, 372
color
development, Israeli miso type products, 1527
frankfurters, during processing, 387
stability, prepackaged fresh beef, 1518
colorants
acanthaxanthin, 331
colorimeter
citrus, development, 906
types, 906
COMARS (*see:* computer, manufacturing)
composition
charcoal, hardwood and lignite, 1133
chemical, cooking ground beef, 779
fatty acids, in fats and oils, 405
fatty acids in frying fats, 1638
frying oils, 349
headspace gas in canned foods, 365
mild-cured hams, 474
computer(s)
control, conduction-heated foods, 1206
controlled automated restaurant, 1076
developing process methods, 1073
history, 723
and EDP, 721, 950
in the food industry, symposium, 1068, 1202, 1340, 1488
in food research, 1488
hardware and software, 816
input/output, 819, 950
industrial, 721, 816, 950, 1068, 1564
management planning and control system, 952, 1340
milk product processing, 1490
manufacturing monitoring systems, 1068, 1564
mass average sterilizing values, 1069
method, food bacteria, identification, 841
nomenclature, food industry, 1073
nutrient economics, use in, 957
ORBIS, 1083
package weight control, 1202
restaurant operation control by, 1076
systems planning, 950
selection of food processing techniques, use in, 1513
computers in food technology series, 731, 816, 950, 1068, 1069, 1076, 1202, 1206, 1340, 1488, 1490, 1564
concentration
freezing of food liquids use for, 49
liquids, flavor retention and heat transfer, 1179
maple sap, by reverse osmosis, 24
concepts
evaporation and evaporator design, 1353
conduction-heated foods
computer thermal process determination, 1206
conductivity
beef during freeze-drying, 408
consistency
tomato concentrates, relation to fruit damage, 69
tomato products, 920
control charts
attributes, 505, 859
practical use in food processing, 505, 731, 859
variables, 505, 731
control system
and management planning, 1340
controlled atmosphere
apple storage, volatiles evaluation, 1643
storage of spinach, 1273
convenience foods
meat-like-ingredient, 168
hydrocolloid rheology, 535
statistics on success/failure, 898
cooking (*see also:* processing)
beef temperature, ante-mortem stress, effect on, 393
frankfurter color, 387
fruit products in agitated kettles, 372
method, effect on insecticide residue in chicken, 435
potatoes for dehydration, 865
cooling
continuous, influence on turkey tenderness, 307
lamb and mutton carcasses, 79
cooling curves
comparison, theoretical and experimental, 81
cooling rate
lamb and mutton legs, 79
corn syrup
replacing sucrose, canned peaches, 658
corrosion
in high-tin-fillet cans, 901
cost
final product; raw materials yield, 1305
cover-fat
mild-cured hams, palatability, 474
crabmeat
canning and storage, effect of antioxidant, 397
nutritive value, 398
cryoscopy
thermistor, in food industry, 132
crystals
foam-mat-dried grapefruit, 293
cucumbers
pickling, precooler, 190
pickling, storage, 74
curtain coating (*see:* monoglycerides)

D

dairy
cryoscopy use in industry, 132
exposition, report on, 20
deep fat frying
batter ingredients, effect on fatty acids, 1638
commercial, quality control, 147
fats and oils used commercially, 405
chemistry and technology, symposium, 33
kettle, design and composition, 36

deep fat frying (cont.)
non-volatile decomposition products, 611
nutritional aspects of thermally-oxidized fats and oils, 278
potatoes, physical and chemical changes, 649
practice, 34
symposium, 33, 34, 143, 278, 611
defective dried apricots
white centers, 420
dehydrated
protein food mixes, quality of foods, 466
pulses and beans, use of papain for quick cooking, 1395

Institute of Food Technologists

The Institute of Food Technologists is a professional society of scientists, engineers, educators and executives in the field of food technology. Food technologists are professionals who apply science and engineering to the research, production, processing, packaging, distribution, preparation and utilization of foods. Individuals who are qualified by education, special training, or experience, are extended an invitation to join in professional association with the select group of the food industry's scientific and technological personnel who are Institute members. Membership is worth many times its modest cost, reflecting positive benefits, stimulation and opportunities for the individual and his business or profession.

OBJECTIVES

The Institute, as a non-profit, professional, educational society, has several major aims: to stimulate investigations into technological food problems; to present, discuss and publish the results of such investigations; to raise the educational standards of Food Technologists; and to promote recognition of the scientific approach to food and the basic role of the Food Technologist in industry. All of these activities have the ultimate objective of providing better and adequate foods for mankind.

ORGANIZATION AND PROGRESS

Organized July 1, 1939, at Cambridge, Mass., with a membership of less than 100, the Institute has grown to more than 9,500 (1967). It is world-wide in scope, with members in the Americas, Scandinavia, England, Holland, Germany, France, India, Australia, New Zealand, and Japan, among others.

QUALIFICATIONS FOR MEMBERSHIP

Professional Members. Any ethically qualified person who has had training and experience in food technology, or who in the opinion of the Council is recognized as distinguished in the contributing sciences as they apply to foods, shall be eligible to be a Professional Member of the Institute. The minimum training which shall qualify a candidate for such membership is, in general, graduation from a college, university or similar institution in which he has majored in one or more of the sciences or branches associated with food technology. The minimum experience shall be three years experience in food technology.

Members. Any ethically qualified person active in special or limited aspects of food technology, who is an Administrator, Director or Executive under whose jurisdiction operations in food technology are conducted; or those engaged in the dissemination of knowledge of food technology; or one whose work requires a general knowledge of the broad principles of food technology as it applies to the products, processes or equipment with which he or she is concerned; or a recent graduate in food technology, or applicable branches of science and engineering who has entered a career in food technology; shall be eligible to become a Member.

Student Members. Any ethically qualified person who is registered as a full-time student in an educational institution with at least Junior (third year) standing, who is a candidate for a Bachelor's or higher degree in one or more of the sciences or branches of engineering associated with food technology, shall be eligible for membership as a Student Member. That classification shall be his status only until the end of the calendar year in which he completes his schooling.

DUES

Professional Members and Members—$20.00 a year; Students—$2.50. Includes subscription to FOOD TECHNOLOGY, Annual Directory (and JOURNAL OF FOOD SCIENCE if requested).

PUBLICATIONS

The Institute publishes two journals. FOOD TECHNOLOGY, issued monthly, is the official journal of the Institute. Besides covering many fields of interest to food technologists throughout the world, it publishes the results of research in food technology and their practical application to industry. The JOURNAL OF FOOD SCIENCE, issued bimonthly, is devoted exclusively to papers presenting original investigations and basic research in fundamental food components and processes. In addition, an IFT WORLD DIRECTORY & GUIDE is published annually.

REGIONAL SECTIONS

Where 25 or more members live within commuting distance of a given point, a regional section may be established. Meetings can be held at more frequent intervals by such groups. Presently, there are 39 regional sections.

AFFILIATE ORGANIZATIONS

Affiliate certificates may be granted to food technology organizations outside the U.S.A. under certain conditions. There are currently five chartered affiliate organizations.

ANNUAL MEETINGS

An Annual Meeting of the Institute provides a specially-organized technical program, awards banquet, and industrial exhibit of equipment, services, processes and ingredients. The program is designed to emphasize current trends and technological developments. Special guest speakers are also invited.

AWARDS

The Institute administers the following awards:

NICHOLAS APPERT AWARD (Medal [donor: Chicago Section] and $1,000). Each year the Institute makes this award to a person whose contributions to the food industry distinguish him in the opinion of the Institute jury.

BABCOCK-HART AWARD ($1,000). The purpose of this award (sponsor: The Nutrition Foundation) is to encourage contributions to Food Technology which will have an influence on the nutritional well-being of the general population.

IFT INTERNATIONAL AWARD (Silver salver). The purpose of this award (sponsor: Australian Institute of Food Science and Technology) is to promote the international exchange of ideas in the field of Food Technology.

FOOD TECHNOLOGY INDUSTRIAL ACHIEVEMENT AWARD (Plaques to company and individuals). This award recognizes and honors an outstanding food process and/or product representing a significant advance in the application of Food Technology to food production, successfully applied in actual commercial operation.

IFT AWARD FOR RESEARCH ($1,000). Created to recognize research scientists, 35 years of age or younger, who have demonstrated outstanding ability in research in some area of Food Science and Technology.

FELLOWSHIPS

- Florasynth—$1,000 and an engrossed plaque
- General Foods—Three, each valued at $4,000, and accompanied by an engrossed plaque
- IFF—$1,000 and an engrossed plaque
- Monsanto—$1,000 and an engrossed plaque
- Nestlé—Two, each valued at $1,000, and accompanied by an engrossed plaque
- Pillsbury—Two, each valued at $1,000, and accompanied by an engrossed plaque
- Samuel Cate Prescott—(donors: various industrial firms)—$1,000 and an engrossed plaque

Purpose of IFT-administered Fellowships is to encourage graduate work in the field of Food Science and Technology directed to extending or improving knowledge in some phase of food conservation, food production, or food processing. Available to graduate students.

SCHOLARSHIPS

- The Fritzsche Brothers, Inc.–Frederick H. Leonhardt Sr. Memorial Scholarship (donor: Fritzsche Brothers, Inc.)—$1,000 and an engrossed plaque
- Gerber (donor: Gerber Baby Foods Fund, Inc.)—Six, each valued at $1,000; accompanied by an engrossed plaque
- Alexander E. Katz Memorial (donor: F. Ritter & Co.)—$1,000 and an engrossed plaque

Purpose of IFT-administered Scholarships is to focus attention on the need for more young people in Food Science and Technology, and to encourage deserving and outstanding students to take undergraduate work leading to a Bachelor's Degree in Food Science, Food Engineering, or Food Technology. Available to incoming Juniors and Seniors who have completed at least one term of study at the institution from which they expect to earn a baccalaureate degree.

IFT SCHOLARSHIPS

- IFT Freshman/Sophomore Scholarships—Thirty, each valued at $500 and including a complimentary subscription to FOOD TECHNOLOGY during the tenure of the scholarship.

Purpose of the IFT Scholarships is to attract and encourage worthy students to enter the fields of Food Technology, Food Engineering or Food Science. Available to incoming college freshmen, and sophomores.
